## CLIL MultiKey lesson plan

Subject: IT (Information Technology) and ICT(Information and Communication Technologies).
Topic: Using Microsoft Excel to plot a chart.
Age of students: $16 / 17$ Students of 1st grade, CLIL beginner stage
Language level: B1

## Time

45-60 minutes

## Theme (methodical unit)

Using Microsoft Excel to plot a chart.

## Content aims

After completing the lesson, the student will be able to:
Define the chart type and category of XY axis.
List different types of graphs used to display data.
Differentiate drawing a graph on the computer from drawing on papers.
Plot a chart from Excel data table.
Use the chart wizard to create the chart.
Format the chart elements (chart axis, change the units, legends, fonts).
Select proper chart for different data.

## Language aims

After completing the lesson, the student will be able to:
Use subject vocabulary.
Explain how to plot a chart using Microsoft Excel.

## Materials:

## Materials needed

Computer stations with installed Microsoft Excel 2007 or higher.
Printed or made in Microsoft Excel worksheet file with examples data tables.

## Optional materials

Network to access the Internet

## Organization of lesson:

## Introduction

Teacher asks students questions:

- How can I represent data? (table, graph).
- Have you ever made the charts on the computer?
- On what subjects can I meet with presentation of the results on a graph? (physics, mathematics)?
- What is different about drawing a graph on the computer from drawing on papers?
- On what the chart types can I present data?

## Procedure

Lead-in:

- Teacher tells the students what a chart/graph is.
- Teacher informs about kinds of graphs used to display data.
- Teacher shows how to plot a chart from Excel data table.
- Teacher explains terms: a data series (a group of cells in a single row or column as the base for plotting the chart)

## Practice/task:

- Students sit at dedicated computer station. Open Microsoft Excel file (students.xlsx) created in the previous lesson.
- Teacher supplies printed materials with tasks for students (student handout).
- Teacher shows students how to use the chart wizard to create the chart step by step. Students view the various types of charts selecting the right to represent the data.
- Students themselves create a chart from series data table specified in Microsoft Excel file (class.xlsx).
- Teacher shows how to format the chart elements (chart axis, change the units, legends, fonts).
- Automatic updating chart - students come to an important conclusion that a changed value of the data series affects the chart.

## Summary

After completing the exercise and save file.
Remind:

- how to create a chart in Microsoft Excel,
- how to change the format of chart elements,
- how to customize a chart type to the data,

## CLIL MultiKey lesson plan

## Student handout ${ }^{1}$

Create table 1 and table 2 in Microsoft Excel if it were not created in the previous lesson. Microsoft Excel spreadsheet save as name given below each table.

## FIRST TASK

Represent the number of students at the classes in a pie chart. The percentage of students from the same village represent in a bar chart. Suggest, as you think, the best way to presenting data series for students from the same village and students from the outside village on the same chart.

| class <br> name | number of <br> students | students from the <br> same village | $\mathbf{\%}$ | students from the <br> outside village | \% |
| :---: | :---: | :---: | :---: | :---: | :---: |
| IA | 31 | 28 | $90,3 \%$ | 3 | $9,7 \%$ |
| IB | 30 | 20 | $66,7 \%$ | 10 | $33,3 \%$ |
| IIA | 28 | 16 | $57,1 \%$ | 12 | $42,9 \%$ |
| IIB | 29 | 12 | $41,4 \%$ | 17 | $58,6 \%$ |
| IIC | 26 | 20 | $76,9 \%$ | 6 | $23,1 \%$ |
| IID | 30 | 30 | $100,0 \%$ | 0 | $0,0 \%$ |
| IIIA | 26 | 24 | $92,3 \%$ | 2 | $7,7 \%$ |
| IIIB | 27 | 19 | $70,4 \%$ | 8 | $29,6 \%$ |
| IVA | 24 | 23 | $95,8 \%$ | 1 | $4,2 \%$ |
| IVB | 25 | 17 | $68,0 \%$ | 8 | $32,0 \%$ |
| Total | $\mathbf{2 7 6}$ | $\mathbf{2 0 9}$ |  | $\mathbf{6 7}$ |  |
| Table 1. students.xIsX |  |  |  |  |  |

Table 1: students.xlsx

## SECOND TASK

represent total number and arithmetic average in a line chart.

|  | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | Total | arithmetic <br> average |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| class I | 86 | 90 | 80 | 110 | 96 | 462 | 92,4 |
| class II | 115 | 104 | 96 | 99 | 91 | 505 | 101,0 |
| class III | 91 | 94 | 106 | 91 | 91 | 473 | 94,6 |
| class IV | 86 | 82 | 97 | 88 | 79 | 432 | 86,4 |
| Total | $\mathbf{3 7 8}$ | $\mathbf{3 7 0}$ | $\mathbf{3 7 9}$ | $\mathbf{3 8 8}$ | $\mathbf{3 5 7}$ | $\mathbf{1 8 7 2}$ |  |
